

# Infrared Thermography

Advanced Electrical Services from Foley Power Solutions can help identify concerning hotspots and safety hazards by using infrared technology. Our certified thermographers can complete the testing without de-energizing your system.

## Infrared Thermography

-  Survey key components, including energized bus, load lugs, cable termination points, control cabinets, contactors, fuses, and control transfers
-  Provide comprehensive reports detailing deficient areas with photographs and recommended actions
-  Record temperature differences between troubling areas and a reference area
-  Recommended frequency: Every 12 – 24 months
